VULCAN CUT-RING™

HEAD GASKETS

A hybrid design forged to harness the best sealing properties of two head gasket types.

COMPOSITE BODY

Pliable, perforated metal-core composite gasket body provides effective sealing of fluids. Polymer coating provides lubricity between gasket and sealing surfaces.

STAINLESS STEEL RINGS

Solid stainless cut-ring 'bites' into the cylinder head forming a positive barrier against combustion pressure leaks. Cut-rings ensure excellent mechanical strength, fixed firmly, in perfect position, on the cylinder head.

SILICONE BEAD SEAL

Silicone bead seal is applied to critical areas. This ensures optimal performance in engine designs, which may be prone to leakage, due to excessive head bolt spacing or deck deflection.

- ▶ ***Bolt-on Ready!***
- ▶ ***Multiple Thicknesses & Bore Sizes***
- ▶ ***No Special Machining Required***
- ▶ ***For HP levels far beyond MLS Spartan gasket capabilities***

▶ **Videos & Info: [SCEgaskets.com/tech](https://www.scegaskets.com/tech)**

MLS SPARTAN[®]

MULTI-LAYER STAINLESS STEEL HEAD GASKETS

Strong, Simple to Use & Ready for Battle.

Advanced manufacturing ensures complete sealing, without need of extra sealants.

Available in 7 thicknesses ranging from .022" to .077"

Bolt-On Ready!

Constructed of high-grade shape-memory AISI 301 stainless steel. Using state-of-the-art manufacturing processes, the layers maintain optimum flatness. The embossments have uniform molecular grain structure in the radii, which increases spring-contact with the block and head, while reducing stress points within the gasket.

MLS SPARTAN[™]

WITH GAS-STOPPER[™] OPTION

Semi-extra layer around the cylinders with precisely-calculated thickness locating increased clamp-load to seal greater combustion pressures.

Look for part numbers with 'GS' suffix.
Ex: M361051**GS**

SUPERIOR COPPER GASKETS

PRO-COPPER® HEAD GASKETS

- **O-rings required** in block or cylinder head.
- Premium solid copper gaskets
- Available in 8 popular thicknesses
- 99% pure copper, rolled to our specifications and tested for uniform flatness to assure precise cylinder head-to-block alignment and eliminate uneven loading.
- After processing, head gaskets are annealed to achieve complete material normalization. This ensures optimum mating and provides measurable gains in cylinder sealing, as evidenced by lower leak-down percentages.

PRO-COPPER · Exotic Fuels · Unlimited Boost

TITAN® HEAD GASKETS

- **O-rings required** in block or cylinder head.
- **Titan = Pro-Copper + bead seals**
- Coolant & oil seals provide effective fluid containment.
- Patented silicone fluid seals are bonded to both sides of the gasket and offset so that when compressed they lie in a single plane with the gasket body thereby “tripping” additional clamp load to the combustion seal, allowing for increased cylinder sealing.
- Available in 7 popular thicknesses.

TITAN · Liquid-Cooled · Unlimited Boost

ICS® HEAD GASKETS

Integral Combustion Seal

- **No O-rings needed** in block or cylinder head.
- **ICS = Pro-Copper + bead seals + o-rings**
- The world’s first self-sealing copper head gasket.
- Features stainless steel O-ring wire inserted into the gasket body around the cylinder bore. Combustion pressure forces the flanges against the head and block for a self-energizing seal.
- ICS seal provides dependable combustion sealing in racing classes that prohibit o-ringing.
- Coolant & oil seals included.
- Available in 6 popular thicknesses.

ICS
Liquid-Cooled · <25 lbs Boost

ACCU-SEAL PRO™

for AMC, Chrysler, Ford & GM Muscle Cars

COMPOSITE / STEEL-CORE HEAD GASKETS

SCE Accu-Seal Pro composite head gaskets are the ideal solution for the performance aftermarket. Strong and easy to use, SCE performance head gaskets are manufactured with the right combination of materials and features for easy and dependable use on real-world, high compression, street/strip power plants.

FEATURES

Compressible body construction

Self - Sealing coating

Silicone Bead Seals (where required)

Extra Thick Fire Rings

BENEFITS

Accepts Standard Surface Finish

No need for additional sealants and no leaks

Enhanced coolant sealing

Stronger Combustion Seal

EMBOSSSED STEEL SHIM HEAD GASKETS

SCE re-introduces classic steel shim head gaskets for high compression use. Stock Eliminator and Super Stock class rules do not allow machining to install o-rings for copper head gaskets. Consequently, racers in these classes use steel shim head gaskets for strength and to 'pump up' their compression ratios. Over the last several years embossed steel shim head gaskets have been hard to find, until now. Super thin, super strong OEM style shim steel head gaskets are once again available for select performance applications.

FEATURES

Single-layer steel

Embossments at seal locations

BENEFITS

Accepts Standard Surface Finish

No need for additional sealants and no leaks

Recommended Applications ***for Various Head Gaskets***

Note: This bar chart is a general guide to head gasket selection based on typical combustion pressures in engines with these modifications. Given the wide range of factors that affect gasket performance such as, camshaft design, ignition timing, fuel type, number of head bolts, etc., suitability for use is the responsibility of the engine builder or end user.

EXHAUST GASKETS

ACCU-SEAL E™

- **Best Use:** Street performance, headers, or stock manifolds.
- .062" thick, high-temperature aramid fiber & graphite material.
- Provides stability & maximum torque retention.

ACCU-SEAL PRO™

- **Best Use:** Racing, turbo-charged, high-temperature.
- .062" thick, aramid fiber & graphite with perforated steel-core.
- Perforated steel core provides stability & maximum torque retention.
- Conforms to header sealing beads & cylinder head surface imperfections.

GRAPH-FORM™

- **Best Use:** Excellent seal for warped, pitted, or uneven manifolds or headers.
- .150" thick, ultra-high-temperature graphite and aramid fiber material.
- Flexible graphite header and collector gaskets compress up to 50%.

PRO-COPPER® EMBOSSED EXHAUST & COLLECTOR GASKETS

- **Best Use:** Premium solution for racing, turbo-charged, & exotic fuels.
- Embossments around exhaust ports conform & seal header, manifold, or collector flange surfaces.
- Solid copper exhaust gaskets eliminate exhaust gasket leaks — will not shrink, deteriorate, or blow-out.
- Available for applications ranging from specialized racing engines to OEM replacement.
- .043" Embossed • .062" Annealed

SBBK™

— SHORT BLOCK BASE KITS —

All the essentials you need for assembling short-blocks

- ▶ Provides remaining gaskets and seals common to the engine type, regardless of customization.
- ▶ Premium kits available with FKM rear main seal.
- ▶ Standard kits include silicone or polyacrylate rear main seal.
- ▶ Contains gaskets for timing cover (oiling system as required), water pump, fuel pump, water outlet, seals for front cover and rear main.
- ▶ Premium Composite Material.

ATHESIL®

RTV SILICONE SEALANT

Designed specifically for high-performance engines.

Our new single-component RTV silicone answers the needs of professionals in the **automotive, marine, motorcycle, heavy duty, & off-road** industries.

Athesil bonds, seals, repairs, secures, and is excellent for formed-in-place gasketing (FIPG).

Testing confirms superior performance of Athesil even under extreme conditions:

THERMALLY STABLE:

- -40°F to 430° F performing even at 572° F peaks.
- Resists aging, weathering, & thermal cycling without hardening, shrinking, or cracking.
- Will not damage exhaust system lambda sensors.
- **Test:** Resistance at 500° F.

SUPERIOR RESISTANCE TO FLUIDS:

- Resists oils, fuels, greases, coolants, & detergents — ensuring ideal shape retention & adhesion to surfaces.
- Other silicones tend to absorb gasoline, oil & other liquids causing deformation.
- **Test:** Resistance & non-deformation when soaked in gasoline.

EASY TO APPLY & EASY TO CLEAN UP:

- Excellent filling & self-leveling properties allow for easy application on both horizontal & vertical surfaces.
- Easily-peelable for fast removal during service.
- **Tests:** non-shrinkage, self-leveling, & peelability.

P/N: G1613 / 1 pc
2.7 oz · 80 ml · Each tube includes applicator tip & tube squeeze key

G1613-12 / Master-Pak 12 pc

ACCU-SEAL PRO™

MOLDED **Rubber Oil Pan &** **Valve Cover Gaskets**

- State-of-the-art molded silicone rubber gaskets for all popular oil pan and valve cover applications.
- Each gasket has built-in crush limiters to prevent damage from over-tightening.

PREMIUM **Intake Gaskets**

- Premium gasket body materials seal tight,
- Resists weeping of oil & coolant.
- Silicone Beads on most Accu-Seal Pro Intake gaskets enhance sealing around intake ports and coolant passages.
- Release coating for easy clean-up.

TUFF-BAK™ **Valve Cover Gaskets**

- Provides lateral strength for high vacuum engine applications and blowout protection.
- Designed to seal porous cast iron head rail surfaces or machined cast aluminum rail surfaces.
- Available in .125" and .250" thicknesses. .250" gasket thickness also provides additional rocker arm clearance.

DYNO-PAK[®]

..... BULK SETS

Bulk 10-Packs for Engine Builders

Dyno-Paks are tailor-made for engine builders and other volume gasket users. Each pack contains 10 complete sets of the gaskets or seals you specify, clearly marked and shipped in a reusable box to protect your investment. Our 10-set bulk program is small enough to make sense, yet still offers discounts up to 20% off the individual package price.

If you're an engine builder, make sure you stock your supply room with SCE Dyno-Paks and reap the benefits of extra profits.

Dyno-Pak part numbers are designated by a **"-10"** suffix & listed adjacent to each individual part number.

Select products available in packs of **100**, designated by suffix **"-B"**.

<p>Master-Pak™ = 12 pc. (Athesil) • "-12" suffix</p>

Frequently Asked Questions

What thickness do you recommend?

We don't recommend thicknesses as each engine build has too many variables.

Should my sleeves protrude above the deck of the block?

This depends. Sleeve protrusion should be no more than 0.002"-0.003" for o-ringed copper gasket use only. All other head gasket solutions require sleeves to be "zero-decked".

What torque specs should I use?

SCE Gaskets does not have specific torque recommendations — use head or engine block manufacturer's specifications.

How do I install SCE Gaskets?

Go to [SCEgaskets.com/instructions](https://www.scegaskets.com/instructions) for detailed instructions — or in the last section at the back our Automotive Performance Catalog.

What finish do you recommend on the heads/block?

See our Head Gasket Quick View Guide on page 8 of this booklet, also on page 232 or our Automotive Performance Catalog.

Are your gaskets reusable?

Pro-Copper: Yes – as long as gasket body is free of dings or gouges.

Titan: Yes – but the silicone bead seal will have to be removed with brake cleaner. And as long as gasket body is free of dings or gouges

ICS: Not recommended, use your discretion.

MLS Spartan: Not recommended, use your discretion.

Vulcan Cut-Ring: The rings are reusable if still circular (haven't been dropped or warped), however the gasket body is not. Separate gasket bodies can be ordered.

O-Ring protrusion?

Depends on gasket thickness. O-ring protrusion ranges from 0.008"-0.018". Additionally, if you are using a receiver groove in the opposite deck the o-ring will push the copper gasket into, then add 0.002"-0.003" to o-ring protrusion.

See [SCEgaskets.com/instructions](https://www.scegaskets.com/instructions) for detailed instructions — or Performance Catalog pages 230-248.

Do I need a receiver groove in the opposite deck?

It is recommended that a receiver groove is used, but it is not necessary for less extreme applications.

Can I use an O-ring with an ICS copper or MLS Spartan?

No. **ICS:** o-rings are already factory-integrated. Using with o-ringed block/head could cause integrated o-rings to push into combustion chamber with catastrophic failure.

MLS Spartan: combustion seal is made from complex embossments, o-ring would compromise this engineering with catastrophic failure.

Compression Ratio Formula

Compression Ratio (CR) is defined as the quantitative relation between the total volume above the piston at BDC, and the clearance volume above the piston at TDC. To determine compression ratio you need to know:

- 1. Cylinder volume (V)** or cylinder displacement, determined by cylinder bore and stroke (indicated by movement of piston from BDC to TDC).

Cylinder volume formula (in cubic inches): $Bore \times Bore \times Stroke \times .7854$

- 2. Clearance Volume (V_{CL})** is the volume above the piston (actually above the top piston ring) at TDC. It consists of several small volumes which are measured in cubic centimeters, or CCs, as follows:

Deck Clearance Volume formula:

$Bore \times Bore \times Depth \text{ of Piston @ TDC} \times 12.87$

Gasket Volume formula:

$Bore \text{ of Gasket} \times Bore \text{ of Gasket} \times Thickness \times 12.87$

(or refer to the chart below)

Valve Notch Volume: Available from your piston MFG, or must be CC'd using a burette. This figure must be **added** to clearance volume.

Piston Dome Volume: Available from your piston MFG, or must be CC'd using a burette. This figure must be **subtracted** from clearance volume.

Combustion Chamber Volume: Available from your cylinder head MFG, or must be CC'd using a burette.

- 3. Convert Total Clearance Volume** from CCs to cubic inches, **multiply** by .06102.

- 4. Add the two volumes together** ($V + V_{CL}$), then **divide** by V_{CL}.

The formula is: $CR = V + V_{CL} / V_{CL}$

GASKET VOLUME CHART (in CCs)

Good Things Start in a Garage

Where it all started — Dan & son, Ryan Hunter, in Dan's garage, 1990.

Born of a need to supply their own racing engines, my father Ryan and grandfather Dan Hunter laid the foundation for SCE Gaskets in Lancaster, California in April 1990. Initially focused on copper head gaskets for drag racing, Ryan applied his ingenuity to racing engine sealing, creating new and patented products and categories such as Pro-Copper embossed exhaust gaskets, Titan Self-Sealing copper head gaskets, and ICS copper head gaskets with built-in o-rings. SCE's product offering quickly grew to include all types of engine gaskets and seals "from the hat to the pan".

Building on our racing heritage, the SCE Gaskets brand went international, gaining distribution through premier wholesale warehouse partners across the United States, Canada, and Australia. In 2011, our family acquired a gasket manufacturing operation in Spencer, Iowa which further

diversified the company's products and customers to include Marine, Industrial, Agricultural, Antique and OE Replacement.

In 2015, we began the search for a location to consolidate our California and Iowa operations for improved production and logistics. In 2017 we selected the picturesque small town of Mount Pleasant, Tennessee as the company's permanent home — about one hour southwest of Nashville.

Today, over 30 years have passed, and the SCE Gaskets brand remains true to its family roots of innovation and vibrant relationships with employees, distribution partners and consumers of its products.

Ryan & son, Aaron Hunter, with Gio Scelzi & BDS Motorsports, Clay County Fair Speedway, Spencer, IA, September 2017.

Strategic Partnership

While the SCE Gaskets brand was firmly established as a leader in quality, SCE needed access to new & rapidly advancing gasket technologies. Athena, a prominent global manufacturer and technology leader, desired increased access to the American marketplace with a US manufacturing presence. Having already known each other from previous joint projects and sharing a similar family business culture, we began to explore a partnership in early 2017.

Athena S.p.A., located in northern Italy, was founded by Giovanni Mancassola in 1973 as a small artisan manufacturer of industrial gaskets. Today, the company boasts an employee force of over 800 with a worldwide presence, yet remains under the ownership and guidance of its founder and his family.

In May of 2018 a new strategic partnership was formed with Athena and now the SCE Gaskets brand is unrivaled in its range of performance engine sealing solutions.

SCE has raised the bar for cylinder head sealing performance and consistency. Our new Gas-Stopper enhancement to MLS Spartan head gaskets is an example of superior design, tooling and processes. Our exclusive Vulcan Cut-Ring head gaskets are also an industry first: superb in strength, simplicity and ease of use. Vulcan Cut-Ring reliably seals hyper-boosted, street-driven and competition liquid cooled engines. Also introduced in this catalog, SCE Gaskets has expanded its offerings to include all popular European and Japanese performance engines.

Stay tuned, our future is bright!

PRO-COPPER®

Solid Copper Head Gaskets for Exotic Fuels & Unlimited Boost.

The Original Embossed Copper Exhaust Gaskets.

VULCAN CUT-RING™

Stainless Steel Cut-Ring & Composite Head Gaskets. Bolt-On Ready. Multiple Thicknesses & Bore Sizes.

MLS SPARTAN®

Multi-Layer Stainless Steel Head Gaskets. Bolt-On Ready. Multiple Thicknesses & Bore Sizes.

ICS®

Integral Combustion Seal - The World's First Self-Sealing Copper Head Gasket.
